

Brian Morrison (AFS-OC Education Chair)

Brian is an aquatic ecologist at BMO Fisheries. He received his honours B.Sc. at Trent University in 2004 and a Fish and Wildlife Technologist diploma from Sir Sandford Fleming in 2002. He has over 20 years of experience and has previously worked for four conservation authorities (Ganaraska, Credit Valley, Nottawasaga and Halton) as well as the Ontario Ministry of Natural Resources and Forestry (MNR) in a range of roles and capacities.

Brian has a strong background in stream ecology, salmonid ecology, population genetics/evolutionary biology, restoration ecology, and the biology and social dynamics of fish culture systems. This eco-evolutionary perspective allows him to bring forth original management ideas and introduce alternative management paradigms. As an aquatic resource professional, he supports evidence-based education, especially around his principal interests, restoration and hatchery reform. He is happy to engage and coordinate opportunities for further education needs within the AFS-OC membership.
